Network License

License is activated on a server (or other network computer) in the RockWare Network License Administrator program. It runs as a Service. Default Port = 5280

RockWorks, LogPlot & PetraSim program

RockWorks, LogPlot & PetraSim are installed on the users' local computer. In the licensing screen, enter the server name (or IP address), port, and protocol – this tells RockWorks, LogPlot or PetraSim how to ask for a license when the user starts the program. "The Listen for a Server" will attempt to fill this automatically for the user.
