localhost: 5280 Service is running License count: 1

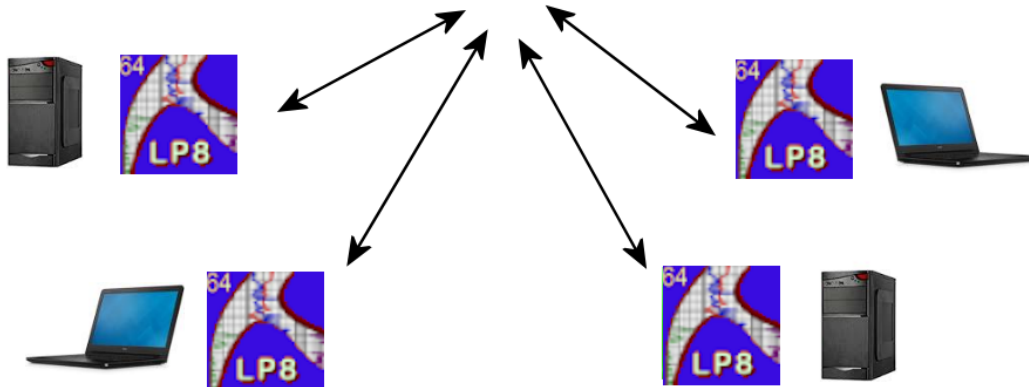

server-a

LogPlot Network License

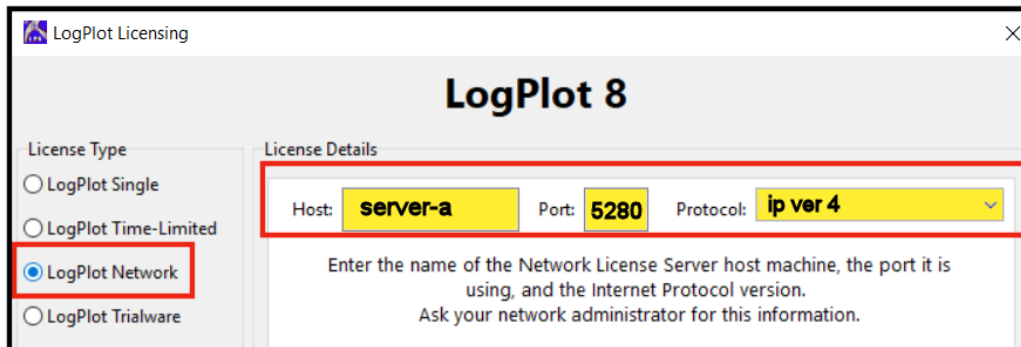

License is activated on server in RockWare Network License Administrator program. It runs as a Service. Default Port = 5280

LogPlot8 Program

LogPlot8 is installed on the users' local computers. In the licensing screen, enter the server name, port, and protocol - this tells LogPlot how to ask for a license when the user starts the program.

LogPlot 8

License Type

- LogPlot Single
- LogPlot Time-Limited
- LogPlot Network
- LogPlot Trialware

License Details

Host: **server-a** Port: **5280** Protocol: **ip ver 4**

Enter the name of the Network License Server host machine, the port it is using, and the Internet Protocol version. Ask your network administrator for this information.
