Earth Science Software, Consulting & Training

Quick Start – LogPlot – Network License – User Info

Server Setup

The network version requires installation of a license manager administrator program which is installed separately. We will email information about the license manager to the designated contact on your account.

Installing LogPlot

You must have Administrator privileges to install and license LogPlot. The LogPlot program should be installed on to each client computer. The program installs as a "Trial" version which can be unlocked to turn off the trial's day/use counter.

1. Visit www.rockware.com and click on the [Downloads / Product Updates / LogPlot](#).
2. Scroll down to the LogPlot20XX item and click the **Download** link.
3. **Save** the installation program to your computer.
4. When the download is complete, **double-click** on the installation file to start the installation. Follow the recommended installation settings.

Licensing LogPlot

1. When installation is complete, start the program. The main LogPlot window will be displayed.
2. To set up the license at this time, click the **Help** menu and select **Change Licensing**.
3. In the LogPlot licensing window:
 - a. **License Type:** On the left side of the window choose **Network**.
 - b. Enter the licensing information. This is typically supplied by your network administrator.
 - **Host:** Enter the name or IP address of the server where the RockWare Network Licensing Service has been installed and is running. If the end user is currently connected to that server, you can also try the **Listen for a Server** option.
 - **Port:** Type into this prompt the port number that the Licensing Service is using. This will default to 5280 but may have been changed by the network administrator when the Licensing Service was installed and set up.
 - **Protocol:** Select which IP Protocol is being used – version 4 or version 6.
4. Click the **Connect** button to proceed in to the program. If the licensing was successful, you will see the status in LogPlot licensing windows as well as in the title at the top of the program window.
5. **Borrowing a seat:** If your network administrator has activated this feature, you may borrow a license for use on your computer when you are not connected to the network. Simply click the **Borrow a License** button in the LogPlot licensing screen. Set the date on which the temporary local license will expire, and click OK. LogPlot will then operate as a stand-alone license for this time period. When you return to the office, start LogPlot, select **Help / Change Licensing**, and click the **Return License** button to check in your borrowed seat.

Getting Help

- Run through the **Tutorial** lessons: Click the **Help / Contents** menu and the Help system will load into your browser. On the Welcome page, click the **Tutorial Lessons**.
- Click on the **Help** button in the program options windows: In your browser you will see the help topic specific to that option.
- Join the online **support forum** where user post questions and answers: Visit www.rockware.com, click **Support / Support Forum**.
- Contact our **technical support staff** at (303) 278-3534, or email us at tech@rockware.com.
