

Fixed Radialgram Radii

The Fixed Maximum will “hardwire” all of the diagrams such that the radius of each diagram corresponds to the specified maximum value. This capability is especially useful when overlaying maps that are based on other data sets. For example, in the diagram shown below, the red polygon (PFUnA, PFDA, PFNA, etc.) has been combined with another map depicting a blue polygon (PFCA, PFSA, PreM, PreS).
